Message from MRASH:  
Get the Community Involved  
by Eileen Fisher, PhD

Dr. S. Leonard Syme, professor emeritus from the University of California-Berkeley, a nationally recognized expert on community-based participatory research energized the audience with his presentation “The Community as an Empowered Partner in Health Interventions: A Missing Link.” Dr. Syme described the first 25 years of his career as a “normal” epidemiologist trying to identify disease risk factors. For the last 15 years, Dr. Syme has been working to develop more effective ways to use this information to improve peoples’ lives. This requires working with people as partners rather than as subjects, and preventing problems rather than treating or managing them. He described how epidemiologists have failed to recognize the community as partners, and how this has led to the failure of a number of projects designed to improve the health and lives of people and communities. It is his belief that you can’t succeed by treating individuals, you need to treat the community. The public health experts have not done a very good job of addressing the diseases of poverty, race, pollution, aging, and social class. And yet we know these are the risk factors for almost every disease we want to prevent. What can we do short of a revolution to fix these problems? The public health community needs to partner with the communities whose behaviors they hope to change. The community has to become engaged in improving their own health and lives and if we do not engage them we are doomed to failure.

Captain Janice Huy, Deputy Director of the National Institute for Occupational Safety and Health’s Office of Research and Technology Transfer, reinforced Dr. Syme’s presentation with the send off keynote on Thursday. Over the 2-day conference, Captain Huy said...

Celebrating the 20th year of I-CASH
by Kelley Donham, MS, DVM

In 1990, the Iowa Legislature passed House File 2548, which created Iowa’s Center for Agricultural Safety and Health (I-CASH). Representatives Josephine Gruen and Wendell Pellett led the bill through the process, with assistance from Representative David Osterberg. Osterberg and Representative Paul Johnson were responsible for several University-based centers during the period from 1985 – 1990, including the Leopold Center for Sustainable Agriculture (ISU), the Center for Health Effects of Environmental Contaminants (UI), and the Center for Waste Reduction (UNI).

The development of I-CASH was facilitated by the “Agriculture at Risk” process (1988 – 1990), which provided a model program of agricultural health and safety for both state and federal governments. Gruen, Pellett, and Osterberg used this model document to draft the I-CASH legislation. The legislation gave general guidelines while the details were developed by an interdisciplinary committee with members from The University of Iowa, Iowa State University, the Iowa Department of Public Health, the Iowa...
I-CASH is seeking proposals for its **2010 Injury Prevention in Agricultural Youth Grants**. Each year I-CASH designates funds for community grants targeted at the prevention of farm-related injury in young people and their families. Ten grants of $500 each are available to decrease the risk of illness and injury from agricultural exposures to youth living on Iowa farms or otherwise involved in production agriculture. This year's theme for all grants is **rural roadway safety**. Application packets are available at [www.public-health.uiowa.edu/icash](http://www.public-health.uiowa.edu/icash). For more information contact LaMar Grafft at 319/335-4233 or lamar-grafft@uiowa.edu. **Application deadline is February 27, 2010.**

**Farm Safety 4 Just Kids (FS4JK)** welcomed Josie Rudolphi to their growing outreach coordinator network. Rudolphi is a graduate student at ISU and was raised on a corn and soybean farm near Williamsburg, Iowa. FS4JK currently has eight, corporately funded, part-time outreach coordinators located in the states of Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, Ohio, and Tennessee. Each outreach coordinator holds at least twenty programs per year in conjunction with ADM, Cargill, and Monsanto sites, community events, county fairs, and local schools. To contact an outreach coordinator call Chapter and Membership Director Tyler Vacha at 800/423-5437.

Since 2003, I-CASH and the Great Plains Center for Agricultural Health have maintained the free listerv “Alive and Well Updates” ([www.public-health.uiowa.edu/icash](http://www.public-health.uiowa.edu/icash)). It is an efficient way to receive monthly abstracts from research publications on rural and agricultural health and safety issues. Upon request, subscribers receive full-text PDFs of the articles.

**MRASH continued**

“Unlike some conferences I have attended where I hear the same thing, I am learning about work being done in the Midwest that translates research to practice (R2P). They may not call it R2P, but they are doing it.” One of Captain Huy’s messages to researchers was to involve a multi-disciplinary team of partners from the very beginning stages of planning right through to evaluation of research-based practices. Among the other topics presented at the forum were rural roadway safety, social marketing, methicillin-resistant staphylococcus aureus, and H1N1.

_Eileen Fisher, PhD, is the Associate Director of I-CASH, she can be reached at 319/335-4224 (eileen-fisher@uiowa.edu)._
NECAS Farm First Aid Kits  
by Dan Neenan, Manager, NECAS

Over the past couple of years, the National Education Center for Agricultural Safety (NECAS) staff has received several requests for the Farm First Aid kit. In response, this year marks the birth of the second generation for the kit, developed to meet the needs of people working in agriculture. Thanks to the generosity of our sponsors, the first shipment of kits were available for purchase by the third week in December and are priced at $35. The original Farm First Aid kit garnered a very positive response and approximately 40,000 kits were sold. These kits have been placed in tractors, combines, farm shops, dairy and hog barns, automobiles, boats and have traveled to college with students.

By the very nature of their work, farmers and ranchers are exposed multiple times each day to the opportunity for injury. In addition, the elements of nature such as heat, cold, and rain contribute to the risk factors for injury and illness. As part of a community needs assessment in the early years of NECAS, the need for accessible and practical first aid care was identified. Part of our response was the development of a first aid kit that would address the types of injuries that happen in an agriculture working day. Cuts and scrapes usually require more than a tiny adhesive bandage. Distance from immediate aid often requires a responder to leave an injured person and go for help; protecting that person from the elements may be vital. A small scissors found in many kits will not cut through coats, jeans, and zippers. Sometimes, an amputated digit that is properly recovered can be reattached. Obviously, a first aid kit is not going to replace caution and safe work practices. A Farm First Aid kit is meant to be just one tool to promote a safe and healthy work environment.

For more information or to purchase a Farm First Aid kit visit the NECAS web page at www.necasag.org. You can also contact us at 563-557-0354, 888-844-6322, or by email at reiterg@nicc.edu.

Goldsmith receives 2009 I-CASH Hall of Fame Award

I-CASH named Jan Goldsmith of Des Moines, Iowa, the 2009 recipient of its Agricultural Safety and Health Hall of Fame Award. Goldsmith is an advanced practice registered nurse who led a 17-year career in the Governor’s Traffic Safety Bureau and joined the I-CASH Advisory Council in 1998. As chair of I-CASH’s Producer’s Committee, Goldsmith has helped spearhead the initiative to raise rural roadway safety awareness through the “It’s Preventable” campaign. Jan continues to provide leadership to the Iowa stakeholders, who have developed an action plan to improve safety on rural roads. The award was presented on November 18, 2009 at the Midwest Rural Agricultural Safety and Health Forum held in Johnston, IA.
