Low back pain is a common and sometimes disabling health problem that affects millions of working age Americans. As a result of groundbreaking research by Great Plains Center ergonomist, Nate Fethke, PhD, we are now learning just how big the problem is among farmers and agricultural workers, as well.

With support from the Great Plains Center, Dr. Fethke has asked over 500 farmers in nine Midwestern states to share their experiences of low back pain (and pain in other regions, such as the neck, shoulder and arm) with him and his colleagues. The results are alarming. Half of the farmers responding to Dr. Fethke’s questionnaire reported experiencing a recent episode of low back pain with sufficient severity to affect their ability to work. Among those who had low back pain, about half of them sought medical care. The farmers in Dr. Fethke’s study are a lot like most farmers – on average, they were 60 years old, four out of five were farm owner operators, and most had been farming for many decades. Oh, and one more thing, most were overweight.

For people with low back pain, and for the health care providers who care for them, low back pain is a hard problem to manage. The good news is that the majority of episodes of low back pain are temporary and don’t lead to more severe back problems. When dealing with mild or moderate back pain, only minor activity limitation is needed. Unless pain is severe, bed rest often makes things worse. On rare occasions, back pain may be the result of serious, but undiscovered illness. If you have low back pain for more than a week or so, get it checked out to be sure nothing more serious is the cause. Also, if you have severe pain, fever, or weakness in the legs, see your health care provider immediately.

With over a decade under their belt, Farm Safety 4 Just Kids is getting a makeover. The organization has maintained the same brand since it was founded in 1987. Agriculture, farm safety, and the organization have changed a lot in the past 25 years, so it’s only natural for the logo and branding to reflect those changes.

The refreshed branding began January 1 and encompasses a new logo in blue and green, symbolizing rural safety. The new logo and color scheme will be used throughout the website and on resource materials, which will now be available as FREE downloads. The PDFs are available on the website and will include options to download the entire education packet, individual sections, or a single lesson plan or activity.

The process of converting entirely to electronic resources will take time. Printed materials will be available until the supply is exhausted, however materials will not be reprinted in the future. Visit www.farmsafetyforjustkids.org to see some exciting new changes!
The University of Iowa, College of Public Health invites applications for a non-tenure track faculty position in Agricultural Health & Safety.

**Department of Occupational and Environmental Health**
The Department of Occupational and Environmental Health serves an important role in education, research, and outreach in the State of Iowa and the nation. The Department offers a rich environment for collaborative activities.

**The Position**
Applications will be considered at the level of Clinical Assistant Professor or Clinical Associate Professor. The successful applicant will be expected to be an active faculty member in the Department of Occupational and Environmental Health; serve in a leadership position of Iowa’s Center for Agricultural Safety and Health; teach graduate-level courses; and contribute to the design, implementation and evaluation of outreach and education programs.

**Required Qualifications**
Applicants must demonstrate the following:

- A doctoral degree (e.g., PhD, DVM, MD) in a relevant science or engineering field
- At least three years of experience in the implementation and evaluation of community outreach and education programs targeting populations at risk for agricultural injury or illness
- Potential to lead and advance Iowa’s Center for Agricultural Safety and Health
- Ability to teach in an academic setting
- Academic focus compatible with the programmatic interests of the Department of Occupational and Environmental Health; Iowa’s Center for Agricultural Safety and Health; and the Great Plains Center for Agricultural Health

**To Apply**
To apply for this position, please visit [http://jobs.uiowa.edu](http://jobs.uiowa.edu), requisition #62159, where you will be asked to submit a curriculum vitae, a statement of research interests, and the names of three professional references. Please address inquiries and nominations to the search committee administrator, Ms. Wendy Walker at wendy-walker@uiowa.edu.

The Department of Occupational and Environmental Health is committed to increasing the diversity of our faculty. The University of Iowa is an Equal Opportunity and Affirmative Action Employer. We strongly encourage women and minorities to apply.

---

**Grain Coalition continued from page 1**
Coalition trainers are currently available to conduct community wide programs for the target audiences in the Midwest. The program has had one training session for those interested in becoming local instructors, and another instructor training session is planned for April.

Members of the Coalition are developing a low cost methodology for establishing lifeline systems for steel grain bins. A DVD and power point presentation illustrating set up and use of the OSHA approved system should be available by June. A safe work procedure that will allow a worker to be in a grain bin while a sweep auger is operating has also been developed and approved by OSHA. Previously, OSHA had not allowed workers under their jurisdiction to be in a grain bin while a sweep auger was operating, which was causing many problems, particularly for grain elevators.

For more information contact Bob Aherin, Agricultural Safety and Health Program Leader, University of Illinois, ruberin@illinois.edu or 217/333-9417.
